Water Shut-off Valves

You don't have to worry about water leaks while you are away if you shut off the master valve on the pipe entering your unit. However, that valve is located in the ceiling outside your door, and it can be difficult to reach and operate it.

Many owners have chosen to have a valve installed in a convenient location inside their unit so they can easily turn the water off themselves when they are going away.

We have arranged for a plumber to make these installations for owners who are wish to have them. The cost is reasonable – about \$200 – plus the cost of a cover – about \$20.
